ZONES®

Realtime Visibility with Zones nterprise® Provisioning

Zones nterprise platform delivers unmatched visibility and reliability for large-scale IT deployments.

BUSINESS CHALLENGES:

Enterprises face significant challenges in scaling IT deployments effectively across numerous sites. Complex projects often encounter delays, inconsistent quality, and a lack of transparency across stages. Managing large-scale IT projects with distributed teams can lead to inefficiencies, reduced visibility, and increased risk of device failures in the field, impacting overall project outcomes.

SOLUTION OVERVIEW:

Zones nterprise is a powerful Distributed Services Management Platform (DSMP) that centralizes control over complex deployments, providing consistent, scalable, and transparent project management from start to finish. Designed to streamline service delivery, Zones nterprise enables real-time project oversight with intelligent dashboards, robust reporting, and a distributed workforce management system. The platform facilitates automated device configuration through our lab, where devices are scheduled and configured according to client specifications. Each device undergoes rigorous quality checks to ensure it is field-ready. Once device preparation is complete, the platform coordinates with our field services team to ensure seamless integration at your site. This process makes project delivery faster, more reliable, and scalable.

DEMO OVERVIEW:

The demo illustrates how Zones nterprise transforms complex deployment projects into controlled and scheduled workflows, providing stakeholders full transparency and showcasing our automated setup and last-mile integration capabilities.
