Smarter, More Connected Hospitals

Intelligent Workflow Automation Ushers In a New Era

Effects of the pandemic are being felt throughout the healthcare sector, as senior clinicians and administrators continue to overcome challenges related to patient care, inventory and asset visibility, labor shortages, and workflow management. Many hospitals are increasingly turning to integrated technology solutions to cope with new demands and prepare for future uncertainties.

Automated workflows are on the horizon

Top three areas where decision-makers plan to implement workflow automation in the next year.

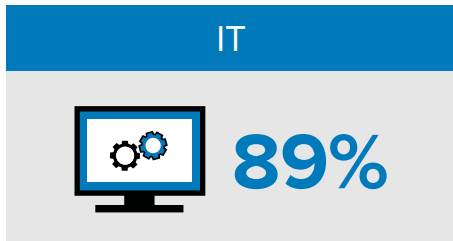

83% Managing the supply chain

80% Orchestrating emergency rooms and operating rooms

80% Locating critical equipment and medical assets

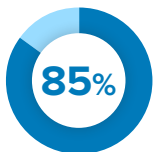

Widespread plans for business intelligence and analytics

Healthcare leaders intend deployment across functional areas.

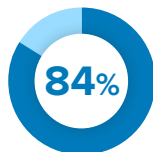

Hospitals cite benefits of clinical mobility

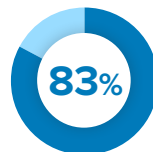

Clinicians and decision-makers emphasize improvements gained in their hospitals.

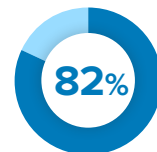

Increases medical workflow accuracy and precision

Reduces preventable medical errors

Raises focus on patient care and attentiveness

Boosts accuracy of supplies tracking and inventory management
